

# RP01 - RE01

*Linear Analog Valve Positioners*

The single & double-acting positioners RP01 and RE01 require an input signal of 3÷15 psi / 4÷20 mA for proportional control actuator. The Positioner compares the output signal from a controller with the position feedback, and varies a pneumatic output signal to the actuator accordingly. The actuator position is therefore guaranteed for any controller output signal and the effects of varying differential pressure.
